enVision Math 2.6 - Model with Math Practice

Randy bought 4 t-shirts. Kim bought 6 t-shirts. The shirts cost \$5 each. How much did the kids spend on t-shirts in all?

1. What is the hidden question you need to answer before you can solve the problem?

2. Solve the problem. Complete the bar diagrams. Show the equations you need.

3. How would your equations change if Kim only bought 4 t-shirts?

enVision Math 2.6 – Model with Math Practice

Answer Key

Randy bought 4 t-shirts. Kim bought 6 t-shirts. The shirts cost \$5 each. How much did the kids spend on t-shirts in all?

1. What is the hidden question you need to answer before you can solve the problem?
How many t-shirts did the kids buy in all?

Check students' drawings.

2. Solve the problem. Complete the bar diagrams. Show the equations you need.

$\$50$; $4 + 6 = ?$; $4 + 6 = 10$;

$10 \times \$5 = ?$; $10 \times \$5 = \50

3. How would your equations change if Kim only bought 4 t-shirts?
Sample answer: I would need to find the cost of 4 t-shirts and 4 t-shirts;

$4 + 4 = ?$; $4 + 4 = 8$;

$8 \times \$5 = ?$; $8 \times \$5 = \40
